RAM Printing announces completion of 4000 sq. ft. expansion

RAM Printing Inc. announces the completion of a 4000 sq. ft. expansion to their existing production facility on Rt. 111 in East Hampstead, NH. The construction, which began late last year came in response to the need for additional production space to accommodate the new Heidelberg Speedmaster CD/74 five-color press with aqueous coating tower that was installed in the spring of 2004. Walter Zaremba, President and co-owner of the family-operated business stated; *"We knew when we purchased the press that the existing facility would accommodate it, but that it would put a difficult strain on the supporting bindery and finishing department. This physical growth is just the next phase of the expansion of our production capacity, allowing us to improve productivity by giving us the needed space for effective work-flow."*

The new addition will primarily house the bindery and finishing equipment, as well as the expanded shipping and receiving departments. Many of these functions had been temporarily relocated to the adjacent building where RAM's subsidiary companies RAM Mailing Service, Hampstead Print and Copy and Guestmark International operate. The new addition brings the total square footage of the main production facility to 16000 sq. ft., with the subsidiary companies housed in a second 12000 sq. ft. building.

In addition to the space for production, the company will also gain much needed office and conference space in the area that previously held the shipping department.

The company looks forward to hosting an open-house in the fall that will allow customers and suppliers a look at the new facility and be reintroduced to the expanse of services that RAM Printing and its subsidiaries can provide.
